

# Stay Connected in an Alarm Emergency

...Safeguard Students, Faculty, Visitors & More

Ensure 1st Responders Rush In Response

Local IP Reporting option for School Security Staff

# Is your school security hanging by a wire?

Avoid a failure to communicate...

make sure your school gets help in an alarm or emergency

even if old phone lines are damaged or discontinued by the phone company

# StarLink®

## Protect Your School or Campus from a Failure to Communicate in an Alarm or Emergency...

Traditionally, in an alarm or emergency, your alarm system detects it, and reports it via phone lines, to get your fast response from the proper authorities and/or your local school security force.

But did you know, every day more of those old expensive leased phone lines are being damaged, by storm or accident, and not replaced, but "retired", i.e., no longer repaired by the phone company jeopardizing response to your emergency response?

### The Days of Old Phone Lines Are Numbered!

- #1 As of Jan 2018, telephone companies are no longer required by the Government to maintain or keep POTS or PSTN lines working
- #2 In the event of a storm or accident, phone lines prone to damage, are no longer replaced
- #3 Old phone lines and networks are too expensive for phone companies to fix/maintain and are being retired or phased-out neighborhood by neighborhood, right now
- #4 Because the supply of POTS/PSTN landlines is low, costs are increasingly high

...but now you have the ability to replace them with cellular &/or IP and save thousands of dollars each year, like many top schools & districts have already with StarLink

Each StarLink Fire® Communicator replaces two phone lines per Fire Alarm Panel for 2x the Savings

## ...Add StarLink, Make Top Grades for Security & Budget-Savings You Don't Need a New Alarm System, Just a New Way of Communicating

StarLink, a leader in universal wireless alarm communications, created a simple cost-effective add-on, that will upgrade your current burglary or fire alarm system for the 21st Century and beyond, using today's fastest and best cyberprotected digital cell and/or IP networks, for local school security and remote alarm reporting and emergency response. On top of that, depending on the size of your district or campus, StarLink's been proven to save school systems like yours, thousands of dollars every year, replacing those undependable, vanishing POTS/PSTN lines, with proven wireless reporting, while meeting today's UL and NFPA Fire Codes.

### Safeguard peace-of-mind, and get new remote smartphone convenience for your security office as a special bonus, too

Using StarLink's advanced cellular technology also enables us to provide you with an App for new remote security system control via your smartphone, too >> Check system status anytime, grant temporary access to get to the gym, auditorium or for deliveries, then remote arm the system afterwards, or even in case someone forgot.

### Upgrade Any Alarm System to Today's Top Wireless Communications & Save Money Every Year by Replacing Old Unreliable, Leased Phone Lines

Keep your school, staff, students & property safe with round-the-clock professional monitoring and emergency response, added-on to virtually any security or fire alarm system, old or new, without rewiring or replacing it. StarLink Wireless Alarm Communicators connect your schools, buildings or whole campus to our licensed monitoring station seamlessly. We use today's fastest multibillion dollar cyberprotected cellular networks and/or backup IP networks, instead of relying on old POTS phone lines that can be cut, down or plain old gone.

We'll get you the help you need in any emergency, quickly and reliably.

**Your Security is our #1 Priority.**
